Chief, Field Operations Staff

Reception Reports of BFEBS Singapore

1. The attached schedule of BFEBS programs for the Far East transmitted from Singapore includes those frequencies which are beamed in the general direction of Okinawa. BBC External Service, through Mr. Campbell, Head of the BBC Monitoring Service, has forwarded this with the request for a reception report from the Okinawa Bureau. Along with this they have expressed their gratitude for earlier reception reports which the Bureau supplied in conjunction with efforts to eliminate interference from a new transmitter at Changta, China, with their Singapore transmitter in the seven megacycle band.

2. No requirements or limitations were imposed regarding the nature or extent of the reception report. However, the request was passed to us under a "confidential" classification. It is believed this was probably the result of a desire on their part to avoid any impression that the FEIS might be technically supporting BBC broadcasting. It is therefore suggested that the reply be transmitted through us via air mail, the report being left unclassified.
